Some or all of these definitions may be found in this report:

Maximum Contaminant Level (MCL) - the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety. Maximum Residual Disinfectant Level (MRDL) - the highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - the level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Below Detection Levels (BDL) - laboratory analysis indicates that the contaminant is not present.

Not Applicable (N/A) - does not apply.

Parts per million (ppm) - or milligrams per liter, (mg/l). One part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) - or micrograms per liter, $(\mu g/L)$. One part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Parts per trillion (ppt) - one part per trillion corresponds to one minute in 2,000,000 years, or a single penny in \$10,000,000.000.

Parts per quadrillion (ppq) - one part per quadrillion corresponds to one minute in 2,000,000,000 years or one penny in \$10,000,000,000,000.

Picocuries per liter (pCi/L) - a measure of the radioactivity in water.

Millirems per year (mrem/yr) - measure of radiation absorbed by the body.

Million Fibers per Liter (MFL) - a measure of the presence of asbestos fibers that are longer than 10 micrometers.

Nephelometric Turbidity Unit (NTU) - a measure of the clarity of water. Turbidity has no health effects. However, turbidity can provide a medium for microbial growth. Turbidity is monitored because it is a good indicator of the effectiveness of the filtration system.

Variances & Exemptions (V&E) - State or EPA permission not to meet an MCL or a treatment technique under certain conditions.

Action Level (AL) - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system shall follow.

Treatment Technique (TT) - a required process intended to reduce the level of a contaminant in drinking water.

Cannonsburg Water District Water Quality Report 2018

Water System ID: KY0100064 Manager: Tim Webb 606-928-9808 CCR Contact: Tim Webb 606-928-9808

Mailing address: 1606 Cannonsburg Rd Ashland, KY 41102

Meeting location and time: Water Office - 1606 Cannonsburg Rd Third Wednesday each month at 11:00 AM This report is designed to inform the public about the quality of water and services provided on a daily basis. Our commitment is to provide a safe, clean, and reliable supply of drinking water. We want to assure that we will continue to monitor, improve, and protect the water system and deliver a high quality product.

Cannonsburg Water District provides purchased water from one supplier, which treats surface water: Ashland Water Works withdraws from the Ohio River. Ashland Water Works has conducted an analysis of susceptibility to contamination and the overall susceptibility is considered moderate to moderately high. Areas of high concern include transportation corridors, underground and above ground storage tanks, agricultural land use, industrial sites, and waste generators. The Source Water Assessment Plan is available for review at the main office of Ashland Water Works. Contact information for our supplier can be obtained by calling our office at 606-928-9808.

Water produced by Ashland Water Works serves all customers.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects may be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and may pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include: Microbial contaminants, such as viruses and bacteria, (sewage plants, septic systems, livestock operations, or wildlife). Inorganic contaminants, such as salts and metals, (naturally occurring or from stormwater runoff, wastewater discharges, oil and gas production, mining, or farming). Pesticides and herbicides, (stormwater runoff, agriculture or residential uses). Organic chemical contaminants, including synthetic and volatile organic chemicals, (by-products of industrial processes and petroleum production, or from gas stations, stormwater runoff, or septic systems).

Radioactive contaminants, (naturally occurring or from oil and gas production or mining activities). In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water to provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Information about Lead:

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Your local public water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

The data presented in this report are from the most recent testing done in accordance with administrative regulations in 401 KAR Chapter 8. As authorized and approved by EPA, the State has reduced monitoring requirements for certain contaminants to less often than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data in this table, though representative, may be more than one year old. Copies of this report are available upon request by contacting our office during business hours.

To understand the possible health effects described for many regulated contaminants, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

Regulated Contaminant Test Results Cannonsburg Water District										
Contaminant			Report	Range of Detection		Date of	Violation	Likely Source of		
[code] (units)	MCL	MCLG	Level			Sample		Contamination		
Inorganic Contaminants	8									
Copper [1022] (ppm)	AL =		0.055						Corrosion of household	
sites exceeding action level	1.3	1.3	(90 th	0.004	to	0.074	Aug-18	No	plumbing systems	
0			percentile)							
Lead [1030] (ppb)	AL =		2						Corrosion of household plumbing systems	
sites exceeding action level	15	0	(90 th	0	to	3	Aug-18	No		
0			percentile)						pranoing systems	
Disinfectants/Disinfect	ion Bypro	oducts and P	recursors	-			-	-		
Chlorine	MRDL	MRDLG	0.94						Water additive used to control	
(ppm)	= 4	= 4	(highest	0.21	to	1.85	2018	No	microbes.	
			average)							
HAA (ppb) (Stage 2)			48						Byproduct of drinking water	
[Haloacetic acids]	60	N/A	(high site	20.9	to	53.6	2018	No	disinfection	
			average)	(range of individual sites)					disinfection	
TTHM (ppb) (Stage 2)			71						Byproduct of drinking water	
[total trihalomethanes]	80	N/A	(high site	30.4	to	116.6	2018	No	disinfection.	
			average)	(range o	f indi	vidual sites)				

Violation 2018-9624022

Cannonsburg Water District received a violation for failing to submit a Monthly Operating Report to the Division of Water on time. Our March 2018 report was due to Division of water by April 10 and it did not arrive on time. This report contains information such as daily chlorine residuals in our distribution system and gallons of water purchased. We have taken steps to ensure a timely delivery in the future. There are no health concerns associated with this violation. We returned to compliance the following month.

		lowable Levels	Highest Single Measurement		Lowest Monthly %	Violation	Likely Source of Turbidity	
Turbidity (NTU) TT	No more	than 1 NTU*						
* Representative samples	Less than	0.3 NTU in	0.28		100	No	Soil runoff	
of filtered water	95% of m	onthly samples						
Regulated Contaminant	Fest Resu	ılts	Ashland W	ater Works		-		
Contaminant			Report	Ra	nge	Date of	Violation	Likely Source of
[code] (units)	MCL	MCLG	Level	of De	tection	Sample		Contamination
Inorganic Contaminants								
Barium [1010] (ppm)	2	2	0.036	0.036 to	0.036	Mar-18	No	Drilling wastes; metal refineries; erosion of natural deposits
Chromium [1020] (ppb)	100	100	5.6	5.6 to	5.6	Mar-18	No	Discharge from steel and puly mills; erosion of natural deposits
Fluoride [1025] (ppm)	4	4	0.70	0.7 to	0.7	Mar-18	No	Water additive which promotes strong teeth
Nitrate [1040] (ppm)	10	10	0.59	0.59 to	0.59	Feb-18	No	Fertilizer runoff; leaching from septic tanks, sewage; erosion of natural deposits
Synthetic Organic Conta	minants	including Pes	ticides and l	Herbicides		-	-	
Di(2-ethylhexyl)phthalate [2039] (ppb)	6	0	BDL	BDL to	2	Oct-18	No	Discharge from rubber and chemical factories
Disinfectants/Disinfection	on Byproc	ucts and Pred	ursors	•			•	•
Total Organic Carbon (ppm) (measured as ppm, but reported as a ratio)	TT*	N/A	1.32 (lowest average)	1.00 to (month	1.79 ly ratios)	2018	No	Naturally present in environment.

Unregulated Contaminants (UCMR 4)	average	range (ppb)	date
HAA5	47.950	34.2 to 62.8	Oct-18
HAA6Br	12.913	9.85 to 16.5	Oct-18
HAA9	60.175	44.7 to 78.2	Oct-18

Your drinking water at Ashland Water Works has been sampled for a series of unregulated contaminants. Unregulated contaminants are those for which EPA has not yet established drinking water standards. There are no MCLs and therefore no violations if found. The purpose of monitoring for these contaminants is to help EPA determine where the contaminants occur and whether they should have a standard. As our customers, you have a right to know that these data are available. If you are interested in examining the results, please contact our office during normal business hours.
