Manager: Kasey Emmick Contact: Mary Edge Phone: 270-281-5187
Address: 9210 State Route 144 Philpot, KY 42366
Meetings: East Daviess County Water Association 3rd Wednesday of Month / 12:00 p.m.

We purchase our water from Owensboro Municipal Utilities (OMU). The source of raw water for OMU is ground water from the Ohio River Alluvium in Daviess County. An analysis of the overall susceptibility to contamination of the OMU water supply indicated that this susceptibility is moderate. There are a total of 220 potential sources of contamination within the well head protection area with the following underground storage tanks, an auto repair facility and industrial land use. Sources of moderate to low potential impact include: food service facilities, quarries, hazardous material storage, and municipal land use. This is a summary of the susceptibility analysis. The complete Susceptibility Analysis Report is available at the Green River Area Development District, 3860 US Highway 60 West Owensboro, KY 42301, (270) 926-4433 and at the Kentucky Division of Water (502) 564-3410.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects may be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and may pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include: Microbial contaminants, such as viruses and bacteria, (sewage plants, septic systems, livestock operations, or wildlife). Inorganic contaminants, such as salts and metals, (naturally occurring or from stormwater runoff, wastewater discharges, oil and gas production, mining, or farming). Pesticides and herbicides, (stormwater runoff, agriculture or residential uses). Organic chemical contaminants, including synthetic and volatile organic chemicals, (by-products of industrial processes and petroleum production, or from gas stations, stormwater runoff, or septic systems). Radioactive contaminants, (naturally occurring or from oil and gas production or mining activities). In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water to provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Your local public water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Some or all of these definitions may be found in this report:

Maximum Contaminant Level (MCL) - the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - the highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - the level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Below Detection Levels (BDL) - laboratory analysis indicates that the contaminant is not present.

Not Applicable (N/A) - does not apply.

Parts per million (ppm) - or milligrams per liter, (mg/l). One part per million corresponds to one minute in two years or a single penny in $10,000.

Parts per billion (ppb) - or micrograms per liter, (µg/L). One part per billion corresponds to one minute in 2,000 years, or a single penny in $10,000,000.

Parts per trillion (ppt) - one part per trillion corresponds to one minute in 2,000,000 years, or a single penny in $10,000,000,000.

Parts per quadrillion (ppq) - one part per quadrillion corresponds to one minute in 2,000,000,000 years or one penny in $10,000,000,000,000.

Picocuries per liter (pCi/L) - a measure of the radioactivity in water.

Millirems per year (mrem/yr) - measure of radiation absorbed by the body.

Million Fibers per Liter (MFL) - a measure of the presence of asbestos fibers that are longer than 10 micrometers.

Nephelometric Turbidity Unit (NTU) - a measure of the clarity of water. Turbidity has no health effects. However, turbidity can provide a medium for microbial growth. Turbidity is monitored because it is a good indicator of the effectiveness of the filtration system.

Variances & Exemptions (V&E) - State or EPA permission not to meet an MCL or a treatment technique under certain conditions.

Action Level (AL) - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system shall follow.

Treatment Technique (TT) - a required process intended to reduce the level of a contaminant in drinking water.

Spanish (Español) Este informe contiene información muy importante sobre la calidad de su agua beber. Tradúzcalo o hable con alguien que lo entienda bien.

The data presented in this report are from the most recent testing done in accordance with administrative regulations in 401 KAR Chapter 8. As authorized and approved by EPA, the State has reduced monitoring requirements for certain contaminants to less often than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data in this table, though representative, may be more than one year old. Copies of this report are available upon request by contacting our office during business hours.

To understand the possible health effects described for many regulated contaminants, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect. A and B= Owensboro Municipal Utility (OMU), C= East Daviess County Water Association

	Allowable Levels	Source	Highest Single Measurement	Lowest Monthly %	Violation	Likely Source of Turbidity
Turbidity (NTU) TT * Representative samples of filtered water at Plant A	No more than 1 NTU* Less than 0.3 NTU in 95% monthly samples	A=	0.298	100	No	Soil runoff; line addition in water treatment process
Turbidity (NTU) TT * Representative samples of filtered water at Plant B	No more than 1 NTU* Less than 0.3 NTU in 95% monthly samples	B=	0.132	100	No	Soil runoff; line addition in water treatment process

Regulated Contaminant Test Results

Contaminant [code] (units)	MCL	MCLG	Source	Report Level	Range of Detection	Date of Sample	Violation	Likely Source of Contamination
Radioactive Contaminants								
Beta photon emitters (pCi/L)	50	0	A=	2.25	2.25 to 2.25	June-20	No	Decay of natural and man-made deposits
Alpha emitters [4000] (pCi/L)	15	0	A=	1.96	1.96 to 1.96	June-20	No	Erosion of natural deposits
Combined radium (pCi/L)	5	0	A=	1.26	1.26 to 1.26	June-20	No	Erosion of natural deposits
Inorganic Contaminants								
Barium [1010] (ppm) at Plant A	2	2	A=	0.0199	0.0199 to 0.0199	June-20	No	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Barium [1010] (ppm) at Plant B	2	2	B=	0.0093	0.0093 to 0.0093	June-20	No	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Copper [1022] (ppm) sites exceeding action level 0	AL = 1.3	1.3	C=	0.027 (90^{th} percentile)	0.00156 to 0.0342	July-20	No	Corrosion of household plumbing systems; erosion of natural deposits
Fluoride [1025] (ppm) at Plant A	4	4	A=	0.72	0.72 to 0.72	June-20	No	Water additive which promotes strong teeth; erosion of natural deposits
Fluoride [1025] (ppm) at Plant B	4	4	B=	0.76	0.76 to 0.76	June-20	No	Water additive which promotes strong teeth; erosion of natural deposits
Nitrate [1040] (ppm)	10	10	A=	0.285	0.285 to 0.285	June-20	No	Fertilizer runoff; leaching from septic tanks, sewage; erosion of natural deposits
Disinfectants/Disinfection Byproducts and Precursors								
Chlorine (ppm)	MRDL = 4	MRDLG = 4	C=	1.35 (highest average)	0.91 to 1.94	2020	No	Water additive used to control microbes.
HAA5 (ppb) (Stage 2) [Haloacetic acids]	60	N/A	C=	23 (Highest LRAA*)	3.3 to 69.8 (range of system sites)	2020	No	Byproduct of drinking water disinfection
TTHM (ppb) (Stage 2) [total trihalomethanes]	80	N/A	C=	50 (Highest LRAA*)	24.9 to 53.7 (range of system sites)	2020	No	Byproduct of drinking water disinfection.

This report will not be sent to individual customers. It will be available at our Water Office. Our Toll Free number is 1(800) 899-6904.

If you wish to file a Civil Rights program complaint of discrimination, complete the USDA Program Discrimination Complaint Form, found online at http://www.ascr.usda.gov/complaint_filing_cust.html, or at any USDA office, or call (866) 632-9992 to request the form. You may also write a letter containing all of the information requested in the form. Send your completed complaint form or letter to us by mail at U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, by fax (202) 690-7442 or email at

Public Service Commission, Consumer Complaints 1(800) 772-4636

The monthly Board meetings are held at the water office on the third Wednesday of the month. Meeting times may vary. Please call the office to confirm the time of the meeting if you would like to attend.

For your convenience we offer AUTOMATIC BANK DRAFT for your monthly water payments. If you are interested, please call the office. Water Bills can also be paid online at www.paythewaterbill.com.

CALL BEFORE YOU DIG!! CALL THE WATER OFFICE TO HAVE THE WATER MAIN LOCATED BEFORE YOU START TO DIG. FOR OTHER UTILITIES - CALL 811 BEFORE YOU DIG.
