2021 Water Quality Report ***Doe Valley Utilities Inc.*** **KY0820641**

Manager: Mike Barbieri Contact: Mike Barbieri Phone: (270) 422-2188

Address: 147 Doe Valley Pkwy. West Brandenburg, KY, 40108

Meetings: Doe Valley General Office Public Meetings Last Friday of each month, 10:00AM

We purchase our water from Meade County Water District. Their sources of water are Hardin County Water District #1 (HCWD#1) and Louisville Water Company (LWC). HDWD#1 utilizes surface water from Pirtle Springs Water Treatment Plant. A source water assessment for HCWD#1 may be obtained from Pirtle Springs Water Treatment Plant at (270) 862-4340. Louisville Water Company (LWC)utilizes the Ohio River as a source for surface water. LWC water operates a surface Treatment plant, with both intakes on the Ohio River. The Kentucky Division of Water approved a source water assessment and protection plan LWC. The plan looks at LWC susceptibility. Two possible sources of contamination. Materials on the Ohio River and permitted discharges of sanitary sewers are the highest contamination risks. In Jefferson County the land use in the protection area is Primarily zoned for residential and commercial use , with only a few industrial sites. Source water contamination risks are relatively low. Louisville water company maintains an emergency preparedness and disaster Service plan to address potential contamination risks. To view the entire LWC Source Water Assessment and Protection Plan call Jeremy Rainey at (502)569-3600 extension 2328.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects may be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and may pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include: Microbial contaminants, such as viruses and bacteria, (sewage plants, septic systems, livestock operations, or wildlife). Inorganic contaminants, such as salts and metals, (naturally occurring or from stormwater runoff, wastewater discharges, oil and gas production, mining, or farming). Pesticides and herbicides, (stormwater runoff, agriculture or residential uses). Organic chemical contaminants, including synthetic and volatile organic chemicals, (by-products of industrial processes and petroleum production, or from gas stations, stormwater runoff, or septic systems). Radioactive contaminants, (naturally occurring or from oil and gas production or mining activities). In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water to provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Your local public water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Some or all of these definitions may be found in this report:

Maximum Contaminant Level (MCL) - the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - the highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - the level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Below Detection Levels (BDL) - laboratory analysis indicates that the contaminant is not present.

Not Applicable (N/A) - does not apply.

Parts per million (ppm) - or milligrams per liter, (mg/l). One part per million corresponds to one minute in two years or a single penny in $10,000.

Parts per billion (ppb) - or micrograms per liter, (µg/L). One part per billion corresponds to one minute in 2,000 years, or a single penny in $10,000,000.

Parts per trillion (ppt) - one part per trillion corresponds to one minute in 2,000,000 years, or a single penny in $10,000,000,000.

Parts per quadrillion (ppq) - one part per quadrillion corresponds to one minute in 2,000,000,000 years or one penny in $10,000,000,000,000.

Picocuries per liter (pCi/L) - a measure of the radioactivity in water.

Millirems per year (mrem/yr) - measure of radiation absorbed by the body.

Million Fibers per Liter (MFL) - a measure of the presence of asbestos fibers that are longer than 10 micrometers.

Nephelometric Turbidity Unit (NTU) - a measure of the clarity of water. Turbidity has no health effects. However, turbidity can provide a medium for microbial growth. Turbidity is monitored because it is a good indicator of the effectiveness of the filtration system.

Variances & Exemptions (V&E) - State or EPA permission not to meet an MCL or a treatment technique under certain conditions.

Action Level (AL) - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system shall follow.

Treatment Technique (TT) - a required process intended to reduce the level of a contaminant in drinking water.

Spanish (Español) Este informe contiene información muy importante sobre la calidad de su agua beber. Tradúzcalo o hable con alguien que lo entienda bien.

To understand the possible health effects described for many regulated contaminants, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

The data presented in this report are from the most recent testing done in accordance with administrative regulations in 401 KAR Chapter 8. As authorized and approved by EPA, the State has reduced monitoring requirements for certain contaminants to less often than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data in this table, though representative, may be more than one year old. **Copies of this report are available upon request by contacting our office during business hours.**

A= Hardin County Water District #1, B= Hardin County Water District #2, C= Louisville Water Company, D= Doe Valley Utilities

Regulated Contaminant Test Results Doe Valley Utilities

Contaminant [code] (units)	MCL	MCLG	Source	Report Level	Range of Detection	Date of Sample	Violation	Likely Source of Contamination
Inorganic Contaminants								
Barium			A=	0.029	0.029 to 0.029	2021	No	Drilling wastes; metal refineries; erosion of natural deposits
[1010] (ppm)	2	2	B=	0.036	0.036 to 0.036	2021	No	
Fluoride			A=	0.67	0.67 to 0.67	2021	No	Water additive which promotes strong teeth
[1025] (ppm)	4	4	B=	0.61	0.61 to 0.61	2021	No	
			C=	0.7	0.7 to 0.7	2021	No	
Nitrate			B=	2.78	2.78 to 2.78	2021	No	Fertilizer runoff; leaching from septic tanks, sewage; erosion of natural deposits
[1040] (ppm)	10	10	C=	1.4	0.6 to 1.4	2021	No	
Nitrite			C=	0.011	BDL to 0.011	2021	No	Fertilizer runoff; leaching from septic tanks, sewage; erosion of natural deposits
[1041] (ppm)	1	1						
Synthetic Organic Contaminants including Pesticides and Herbicides								
2,4-D			C=	BDL	BDL to 0.29	2021	No	Runoff from herbicide used on row crops
[2105] (ppb)	70	70						
Atrazine			B=	0.011	BDL to 0.27	2021	No	Runoff from herbicide used on row crops
[2050] (ppb)	3	3						
Disinfectants/Disinfection Byproducts and Precursors								
Total Organic Carbon (ppm)			A=	1.63	1.00 to 2.73	2021	No	Naturally present in environment.
(report level=lowest avg.	TT*	N/A	B=	1.26	1.00 to 2.56	2021	No	
range of monthly ratios)			C=	1.37	0.72 to 2.04	2021	No	
*Monthly ratio is the % TOC removal achieved to the % TOC removal required. Annual average must be 1.00 or greater for compliance.								
Chloramines (ppm)	MRDL = 4	MRDLG = 4	C=	2.35 (highest average)	0.85 to 2.90	2021	No	Water additive used to control microbes.
HAA (ppb) (Stage 2) [Haloacetic acids]	60	N/A	C=	38 (average)	6 to 36.1 (range of individual sites)	2021	No	Byproduct of drinking water disinfection
TTHM (ppb) (Stage 2) [total trihalomethanes]	80	N/A	C=	20 (average)	10.5 to 26.4 (range of individual sites)	2021	No	Byproduct of drinking water disinfection.
Household Plumbing Contaminants								
Copper [1022] (ppm) sites exceeding action level 0	AL = 1.3	1.3	C=	0.757 (90^{th} percentile)	0.031 to 0.836	July-2019	No	Corrosion of household plumbing systems
Lead [1030] (ppb) sites exceeding action level 0	AL = 15	0	C=	4 (90^{th} percentile)	0 to 8	July-2019	No	Corrosion of household plumbing systems

Other Constituents						
Turbidity (NTU) TT * Representative samples	**Allowable Levels**	**Source**	**Highest Single Measurement**	**Lowest Monthly %**	**Violation**	**Likely Source of Turbidity**
Turbidity is a measure of the clarity of the water and not a contaminant.	No more than 1 NTU*	A=	0.09	100	No	Soil runoff
	Less than 0.3 NTU in	B=	0.04	100	No	
	95% monthly samples	C=	0.09	100	No	

This report will not be sent to individual customers. It will be available at our office.
