Some or all of these definitions may be found in this report:

Maximum Contaminant Level (MCL) - the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - the highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - the level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Below Detection Levels (BDL) - laboratory analysis indicates that the contaminant is not present.

Not Applicable (N/A) - does not apply.

Parts per million (ppm) - or milligrams per liter, (mg/l). One part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) - or micrograms per liter, (μ g/L). One part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Parts per trillion (ppt) - one part per trillion corresponds to one minute in 2,000,000 years, or a single penny in \$10,000,000,000.

Parts per quadrillion (ppq) - one part per quadrillion corresponds to one minute in 2,000,000,000 years or one penny in \$10.000.000.000.000.000.

Picocuries per liter (pCi/L) - a measure of the radioactivity in water. **Millirems per year (mrem/yr)** - measure of radiation absorbed by the body.

Million Fibers per Liter (MFL) - a measure of the presence of asbestos fibers that are longer than 10 micrometers.

Nephelometric Turbidity Unit (NTU) - a measure of the clarity of water. Turbidity has no health effects. However, turbidity can provide a medium for microbial growth. Turbidity is monitored because it is a good indicator of the effectiveness of the filtration system.

Variances & Exemptions (V&E) - State or EPA permission not to meet an MCL or a treatment technique under certain conditions. Action Level (AL) - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system shall follow.

Treatment Technique (TT) - a required process intended to reduce the level of a contaminant in drinking water.

Spanish (Español) Este informe contiene información muy importante sobre la calidad de su agua beber. Tradúzcalo o hable con alguien que lo entienda bien.

Sebree Water Department

2022 Water Quality Report

Water System ID: KY1170388 Manager: Jason Alstadt 270-835-7501 CCR Contact: Jason Alstadt 270-835-7501

Mailing address: P.O. Box 245 Sebree, KY 42455

Meeting location and time: Sebree City Hall, 36 S. Veterans Way Third Monday each month at 5:00 PM This report is designed to inform the public about the quality of water and services provided on a daily basis. Our commitment is to provide a safe, clean, and reliable supply of drinking water. We want to assure that we will continue to monitor, improve, and protect the water system and deliver a high quality product.

Sebree Water Department purchases water treated by Henderson Water Utility at the South Water Treatment Plant. The water is surface water from the Green River. A source water assessment for this system has been completed and is contained in the Henderson County Water Supply Plan. An analysis of the susceptibility of Henderson's Green River water supply to contamination indicates that this susceptibility is generally moderate. However, there are areas of high concern. Potential sources of concern include bridges, waste generators, transporters, landfills, railroad, row crop land, urban and recreational grass coverage, and sewer lines. All of these are rated as high in susceptibility because of the contaminant type, proximity to the intakes, and chance of release. The complete plan is available for inspection at Henderson Water Utility or the Green River Area Development District office in Owensboro, KY.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects may be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and may pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include: Microbial contaminants, such as viruses and bacteria, (sewage plants, septic systems, livestock operations, or wildlife). Inorganic contaminants, such as alts and metals, (naturally occurring or from stormwater runoff, wastewater discharges, oil and gas production, mining, or farming).

Pesticides and herbicides, (stormwater runoff, agriculture or residential uses). Organic chemical contaminants, including synthetic and volatile organic chemicals, (by-products of industrial processes and petroleum production, or from gas stations, stormwater runoff, or septic systems). Radioactive contaminants, (naturally occurring or from oil and gas production or mining activities). In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water to provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Information About Lead:

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Your local public water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

To understand the possible health effects described for many regulated contaminants, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

The data presented in this report are from the most recent testing done in accordance with administrative regulations in 401 KAR Chapter 8. As authorized and approved by EPA, the State has reduced monitoring requirements for certain contaminants to less often than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data in this table, though representative, may be more than one year old. Copies of this report are available upon request by contacting our office during business hours.

Regulated Contaminant Test Results Henderson Water Utility South								
Contaminant			Report	Range		Date of		Likely Source of
[code] (units)	MCL	MCLG	Level	of De	tection	Sample	Violation	Contamination
Barium [1010] (ppm)	2	2	0.024	0.024 to	0.024	Feb-22	No	Drilling wastes; metal refineries; erosion of natural deposits
Fluoride [1025] (ppm)	4	4	0.63	0.63 to	0.63	Feb-22	No	Water additive which promotes strong teeth
Nitrate [1040] (ppm)	10	10	1.08	1.08 to	1.08	Feb-22	No	Fertilizer runoff; leaching from septic tanks, sewage; erosion of natural deposits
Disinfectants/Disinfection Byproducts and Precursors								
Total Organic Carbon (ppm (measured as ppm, but reported as a ratio)	TT*	N/A	2.16 (lowest average)	1.29 to	2.88 ly ratios)	2022	No	Naturally present in environment.
*Monthly ratio is the % TO	C remova	achieved to th	ne % TOC rem	oval required	l. Annual aver	age must be 1	.00 or grea	ter for compliance.
Chlorite (ppm)	1	0.8	0.37 (average)	0.02 to	0.5	2022	No	Byproduct of drinking water disinfection.
Chlorine dioxide (ppb)	MRDL = 800	MRDLG = 800	540	0 to	540	2022	No	Water additive used to control microbes.
Other Constituents								
Turbidity (NTU) TT	All	owable	Highest Single		Lowest	Violation		
* Representative samples	L	evels	Measurement		Monthly %		Likely Source of Turbidity	
Turbidity is a measure of the clarity of the water and not a contaminant.	Less than	than 1 NTU* 0.3 NTU in onthly sample:	0.854		99	No	Soil runoff	

	Average	Range of Detection
Fluoride (added for dental health)	0.8	0.66 to 0.99
Sodium (EPA guidance level = 20 mg/L)	9.9	9.94 to 9.94

Secondary contaminants do not have a direct impact on the health of consumers. They are being included to provide additional information about the quality of the water.

Secondary	Maximum Allowable	Report	Range	Date of
Contaminant	Level	Level	of Detection	Sample
Aluminum	0.05 to 0.2 mg/l	0.02	0.02 to 0.02	Feb-22
Chloride	250 mg/l	10	10 to 10	Feb-22
Corrosivity	Noncorrosive	-1.37	-1.37 to -1.37	Feb-22
Fluoride	2.0 mg/l	0.76	0.76 to 0.76	Feb-22
Foaming Agents	0.5 mg/l	0.2	0.2 to 0.2	Feb-22
pН	6.5 to 8.5	7.21	7.21 to 7.21	Feb-22
Sulfate	250 mg/l	40.8	40.8 to 40.8	Feb-22
Total Dissolved Solids	500 mg/l	182	182 to 182	Feb-22

Regulated Contaminant Test Results Sebree Water Department									
Contaminant			Report	Range		Date of		Likely Source of	
[code] (units)	MCL	MCLG	Level	of Detection		Sample	Violation	Contamination	
Chlorine	MRDL	MRDLG	1.48						Water additive used to control
(ppm)	= 4	= 4	(highest	0.79	to	1.81	2022	No	microbes.
			average)						microscs.
HAA (ppb) (Stage 2)			41						Deven dust of deiglein a sent on
[Haloacetic acids]	60	N/A	(high site	11	to	56	2022	No	Byproduct of drinking water disinfection
			average)	(range o	of indiv	idual sites)			disinfection
TTHM (ppb) (Stage 2)			43						D
[total trihalomethanes]	80	N/A	(high site	15	to	77	2022	No	Byproduct of drinking water disinfection.
			average)	(range o	of indiv	idual sites)			disiffection.
Household Plumbing Contaminants									
Copper [1022] (ppm) Roun	AL =		0.3						C
sites exceeding action level	1.3	1.3	(90 th	0	to	0.31	Jul-22	No	Corrosion of household plumbing systems
0			percentile)						prunoning systems
Lead [1030] (ppb) Round 1	AL =		3.8						C
sites exceeding action level	15	0	(90 th	0	to	180	Jul-22	No	Corrosion of household plumbing systems
1			percentile)						prumonig systems

Violation 2022-9950413 - Our water system failed to comply with a required testing procedure. Even though this was not an emergency, as our customers, you have a right to know what happened and what we did to correct the situation.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During April 2022, we did not complete all monitoring or testing for total coliform bacteria, and therefore cannot be sure of the quality of your drinking water during that time.

There is nothing you need to do at this time. You may continue to drink the water. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.

We are required to collect two routine bacteriological samples per month. During the month of April 2022, we inadvertently failed to collect and submit one of the two required total coliform bacteria samples. Procedures have been established to prevent similar situations in the future.

For more information, please contact Jason Alstadt at 270-835-7501 or P.O. Box 245 Sebree, KY 42455.

*Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.
